

A CATERPILLAR HEALTH EXAM CHANGED MY LIFE

In June 2020, **Rob Peters** (Mossville, IL) scheduled his Caterpillar Health Exam and requested his prostate specific antigen (PSA) level be calculated along with his other bloodwork. When his results came back, his PSA registered 7.5—a high score for a man his age. Having seen his PSA trending upward over the past several years, Rob’s Total Health Physician recommended he follow up with his primary care provider about his concerning results. Nine days later, Rob underwent a biopsy and was diagnosed with prostate cancer. After multiple consultations and considering his options, Rob decided to have his prostate surgically removed. While still undergoing treatment, thanks to his cancer’s early detection, Rob’s long-term prognosis is very good. He is “very grateful for those who oversee, manage and provide the Caterpillar Health Exam program,” which he says, “made all the difference—a life and death difference for me!”
